Sakka, Sumio.
EFFECT OF REHEATING ON THE STRENGTH OF GLASS FIBERS. [1960] 6p (3 figs. omitted) 9 refs.
Order from SLA mi$1.80, ph$1.80 61-10157

Trans. of article from an unidentified Japanese journal, 1957, no. 65, p. 190-192.

The tensile strengths of glass fibers containing 67% SiO_2, 12% B_2O_3, 2% BaO, 9% K_2O, 9.5% Na_2O and 0.5% Al_2O_3 were determined both after heating at temperatures between room temperature and their softening point and after similar heating followed by etching with hydrofluoric acid. The heating caused lowering of tensile strength but removal of a thin surface layer of heated glass fiber by etching restored the tensile strength observed before the heating. (Author)
